

REASONS WHY CUSTOMERS USE EURO ENERGY RESOURCES

We Listen Carefully To Our
Customers' Requirements

Projects Are Managed From
Initial Design To Bulk
Production

Dedicated Technical Team
Providing Support For The
Life Of The Project

Sampling And Prototypes
Supplied

Small, Medium And High
Volumes Produced

Testing Available

UK Manufactured

30 Years Battery Pack
Manufacturing Experience

Reverse Engineering
Specialists

BS EN ISO 9001: 2008
Accredited Supplier

NCAGE U6072

WHAT CUSTOMERS HAVE BEEN SAYING ABOUT US

"Euro Energy's Engineering
Expertise Has Been
Invaluable"

"Quality Management And
Procedures Administration
Are First Class"

CUSTOM BATTERY PACKS

For 30 years, Euro Energy has worked with a very diverse range of customers, designing battery packs to power their equipment. Today Euro Energy is a leading designer and manufacturer of custom battery packs and all packs are UK manufactured within a quality standards framework.

What's more, a fully dedicated technical team will help guide you through a project from conception to completion. Full customer service and technical support are always provided as standard for the life of a project.

Both non-rechargeable and rechargeable battery packs can be manufactured in different chemistries. Euro Energy works closely with all of its customers to develop battery packs that fully meet specifications in terms of performance and cost.

Please contact Euro Energy to see how they can help meet your power needs.

BATTERY DESIGN

Battery packs can be designed in many different configurations from simple sleeved packs through to complex designs requiring electronics, chargers, mouldings, castings, vacuum formed and ultra sonically welded cases.

Battery packs are designed to match the environment in which they are destined to work. They are fully compliant with all Regulatory requirements.

Chemistries include Lithium, Nickel Metal Hydride, Sealed Lead Acid, and Alkaline.

PROJECT MANAGEMENT

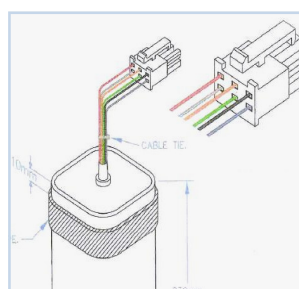

Euro Energy Resources provides a complete project management service. This involves anything from initial consultation, design and sourcing of components, through to battery pack production, from start up to high volumes, analysing and testing through to delivery of finished product.

Samples and prototypes can be provided on new projects where required by the customer.

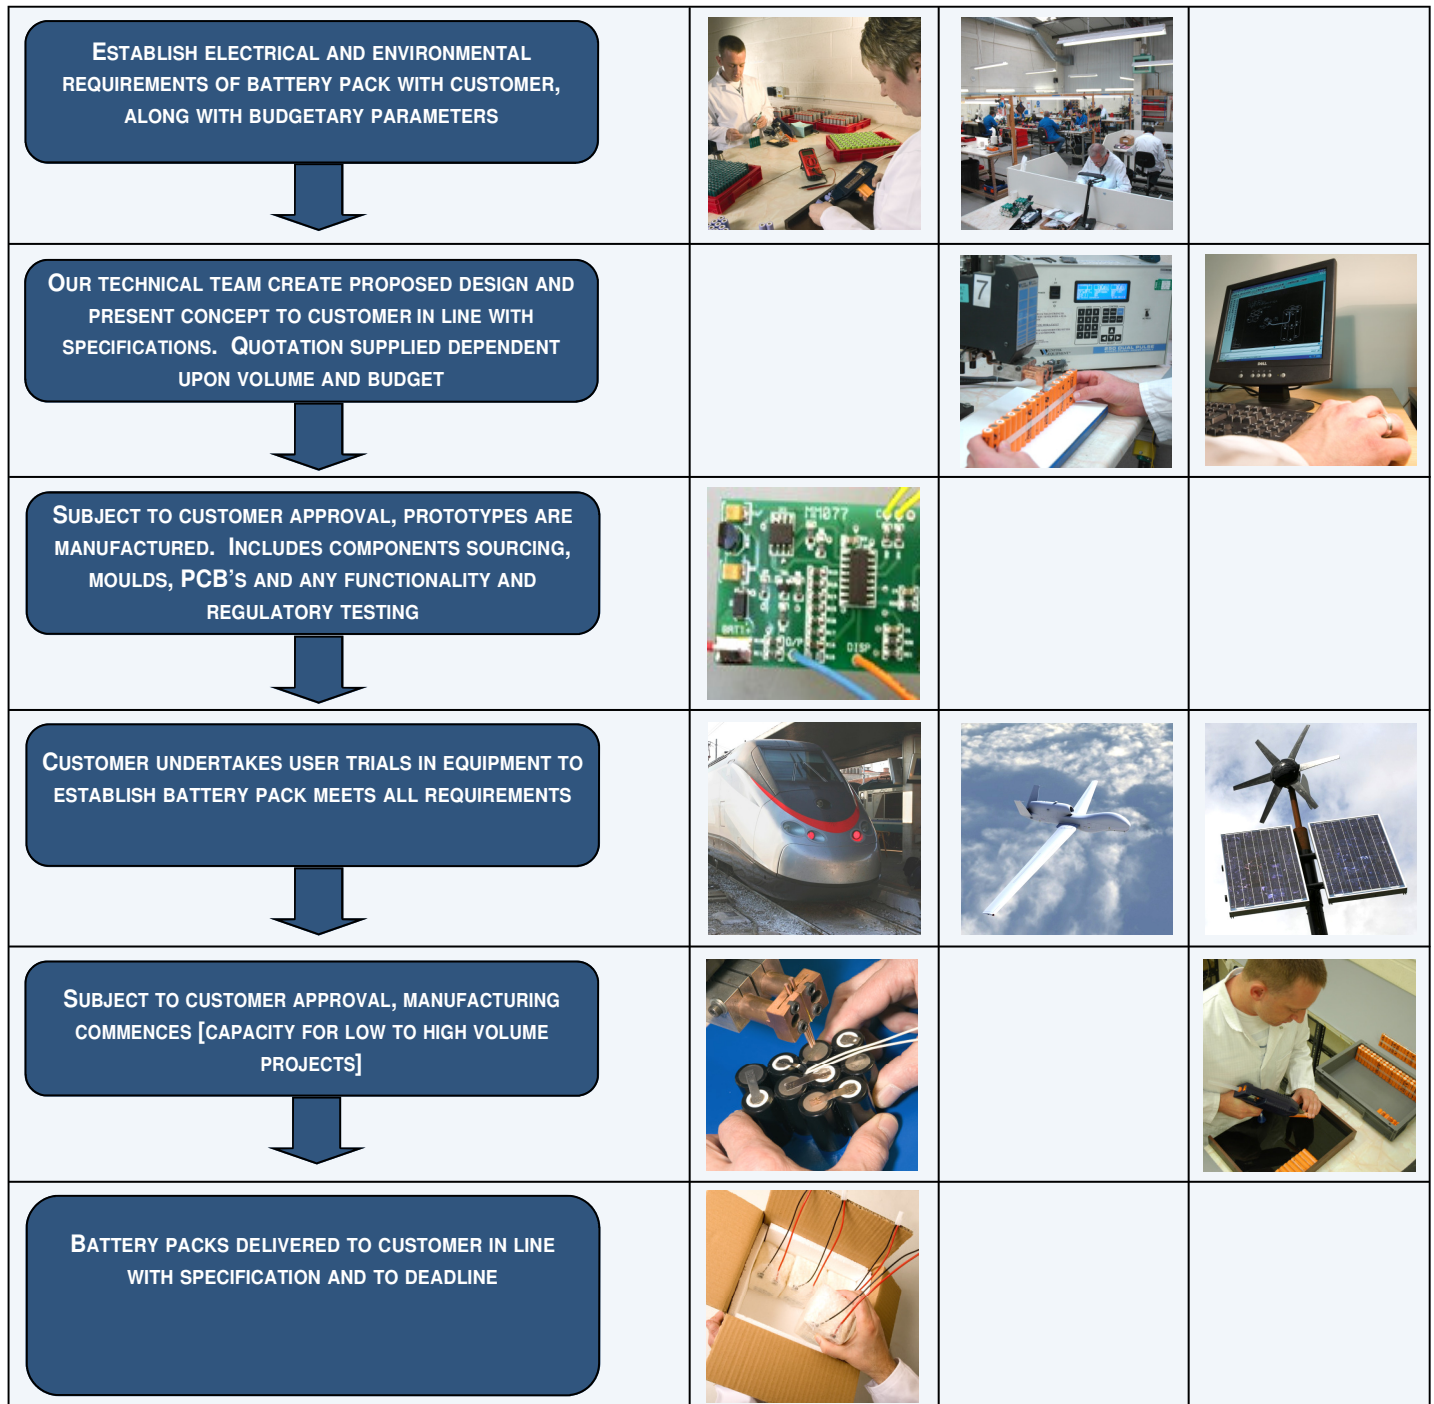

QUALITY & TESTING

Battery packs are manufactured within the framework of BS EN ISO 9001:2008 to ensure consistent quality and process control.

We frequently undertake testing on behalf of the customer using our extensive range of equipment, including our Bitrode MCV5-24 channel test suite. This ensures that the battery pack matches the specification and environment in which it is intended to work.

TYPICAL LIFE OF A PROJECT

****TYPICALLY PRODUCTION COMMENCES ANYTHING FROM 2-3 YEARS FROM CONCEPT DOWN TO 3 WEEKS**
