

Lithium Project Ready Range

Standard battery solutions to meet the needs of your business

Lithium Product Ready Range

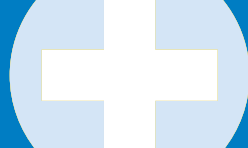

Our standard Li-Ion battery packs offer a fast route to production for new projects requiring a lightweight portable battery solution without the need for expensive CE and UN38.3 testing. They are produced from Lithium Cobalt Oxide (LiCoO₂) 18650 sized cells and are offered in a range of useful voltages, capacities and shapes to suit many applications. Voltages range from 3.7V to 25.9V and capacities up to 10400mAh.

As your project volume requirements increase, we can offer price breaks to ensure we remain competitive.

Additionally we can add either injection moulded or vacuum formed cases to make the battery blend aesthetically with the design of your equipment.

Refer to the data sheets for the performance details of each of the available batteries, but if you want to discuss your project to ensure you have the correct battery for your needs, make sure you call us first!
